

SURGICAL INFORMATION PACKET

Dear Client,

Your pet has been scheduled for an upcoming surgery in the near future. In our attempt to assist clients, we have put together this packet to make surgery day as easy and stress-free as possible.

In addition to this letter, you will find that the following information has been enclosed:

1. Pre-Anesthetic Blood Testing Information Form

2. Surgical Information Sheet

Please read carefully all the enclosed information. If you have any questions, please feel free to call us. On your pet's surgery day, we require you to review and sign an **Authorization/Estimate Form**- which allows you to choose optional services.

We require a phone number(s) where you can be reached surgery day.

Failure to be reached on the day of the procedure may result in postponement of the surgery.

The night before your pet's surgery...

- **Withhold all food and treats after 8:00PM**
- **Water may be left down after this time period**
- **If you are currently administering any medications, vitamins and/or injections, please withhold the morning doses unless otherwise instructed by the doctor.**

Please make arrangements for your pet to be dropped off on the morning of scheduled surgery, unless other arrangements have been made in advance. For example, dropping off the afternoon before surgery day if you cannot drop off between 8:15AM-8:30AM the day of. At time of drop off, our team will be happy to answer any questions/concerns and collect the enclosed/completed **Authorization Forms**.

Our veterinary nurse will escort your pet to the surgical prepping area to wait for their surgery. If your pet needs blood testing done, our nurse will collect all samples and perform test prior to surgery.

If any questions arise, the doctor may contact you at the number on the Authorization Form. The doctor will call when the procedure is completed. We will schedule a discharge appointment if one has not already been scheduled. When you arrive to take your pet home, the receptionist will invoice you out and the veterinary nurse will go over all discharge instructions verbally and give you a written copy. If you do not understand any instructions, please do not hesitate to ask them to go over them one more time.

We hope surgery day will be a pleasant experience. Remember, our team knows surgery can be an anxious time and we are always available to answer any and all questions concerning the upcoming procedure.

We look forward to serving you and your pet on the upcoming surgery day and years to come.

PRE-ANESTHETIC BLOOD TESTING INFORMATION FORM

PLEASE READ CAREFULLY.

Our greatest concern is the well being of your pet. Before putting your pet under anesthesia, we routinely perform a full physical examination.

We also require that a **Pre-Anesthetic Blood Profile** be performed on all pets undergoing anesthesia to maximize patient safety.

The **Pre-Anesthetic Blood Profile** helps alert our surgeon to the presence of dehydration, anemia, infection, diabetes and/or kidney or liver disease that could complicate the procedure. These conditions may not be detected **without** a pre-anesthetic profile thus not allowing for the most appropriate and safest anesthetic regime to be administered. These test are similar to those your own physician would run if you were to undergo anesthesia. In addition, these test may be useful if your pet's health changes to develop faster, more accurate diagnoses and treatments.

*State of the art equipment enables us to perform the pre-anesthetic blood profile at our hospital and we are committed to making this technology available to our patients.

The **Authorization Form** you will sign on your pet's surgery date will offer pre-anesthetic blood work.

1. **The Quantitative Blood Count (QBC) and Pre-Anesthetic Profile** which includes:

- **CBC:** PCV (Anemia), White Blood Cell Count (Infection) & Red Blood Cell Count (Anemia/Bleeding Disorder), Platelet Count (Clotting Disorder)
- **Profile:** BUN and Creatinine (Kidney), ALKP and ALT (Liver), Glucose (Sugar), Total Protein (Dehydration), and Electrolytes (Imbalance).
- **Coag Panel:**

If your cat has not has a feline leukemia and feline AIDS (FIV) test done; this is a great time to do it.

We realize surgery and anesthesia are scary for both the owner and patient; we attempt to make surgery day as safe and comfortable for all involved. The physical examination and blood work done prior to any surgical procedure allows us to best minimize anesthetic and surgical risks and maximize patient safety.

If you have any questions or hesitations about the scheduled procedure, please do not hesitate to call us to discuss any aspect of the upcoming procedure.

SURGICAL INFORMATION FORM

PLEASE READ CAREFULLY.

Anesthetic Procedures & Risks

We use a combination of pre-anesthetic medications/injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

For short procedures, an injectable anesthetic is given alone that produces a good plane of surgical anesthesia with a quick recovery.

For most procedures, your pet is anesthetized and then intubated (insertion of a tube into a trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs.

Monitoring & Pain Management

Monitoring of patients during anesthesia is done just the same as a human physician. A veterinary nurse is with your pet continuously from beginning of anesthesia to recovery. The nurse monitors heart rate, blood pressure, oxygen levels, respiration, ECG, core and rectal temperature.

Our clinic strongly believes in compassionate, quality, medical care for our patients. As a result, all surgery patients will receive pain management before, during and after surgery. Additionally, pain medication may be prescribed home. Additional information will be given at discharge. We hope this program will reduce any discomfort experienced and aid in a quicker recovery.

Intravenous Catheterization & Fluids

All of our patients get an IV catheter and receives IC fluids during all anesthetic procedures. This allows us to have quick, available access to the circulatory system (blood) in case of an unforeseen emergency. The fluids help provide support to the circulatory system and prevent dehydration, as well as aid in a quicker recovery from anesthesia.

Potential Surgical Complications

1. Canine and Feline Spay

1. Bleeding
2. Infection
3. Recurrent Heat
4. Urinary Incontinence
5. Weight Gain
6. Suture Reactions

2. Canine and Feline Alter

1. Bleeding
2. Infection
3. Testicular Swelling
4. Suture Reaction (Canine Only)

3. Feline Declaw

1. Bleeding
2. Infection
3. Limping/Lameness
4. Re-growth of Nail

4. Tumor/Lump Removal

1. Bleeding
2. Infection
3. Swelling & Drainage
4. Suture Reaction

It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime these procedures are performed. We strive to take the highest quality care of your pet and take all the added precautions you allow to avoid potential problems. Thank you for entrusting you pet to us.
